

1.0 子空间.

定义. $V(F)$ 为 F 上线性空间, $W \subseteq V(F)$, W 关于 $V(F)$ 运算仍为线性空间.

例. $R^{[0,1]}$ 定义在区间 $[0,1]$ 上的所有实值函数.

$$X^Y = \{f | f: Y \rightarrow X\}.$$

子空间的条件 = ① 加法封闭 ② 数乘封闭.

(判定) ③ $W \neq \emptyset \Leftrightarrow 0 \in W$

子空间的和

$$V_1, \dots, V_n \subseteq V(F)$$

$$V_1 + V_2 + \dots + V_n = \{\alpha_1 + \dots + \alpha_n \mid \alpha_i \in V_i\}.$$

$$\left. \begin{array}{l} V_1, \dots, V_n \subseteq V(F) \\ V_1 + V_2 + \dots + V_n \end{array} \right\} \Rightarrow \begin{array}{l} V_1 + \dots + V_n \subseteq V(F) \\ \downarrow \\ V_1, \dots, V_n \text{ 的和空间.} \end{array}$$

$$1.39 \quad V_1 + \dots + V_n = L(V_1, V_2, \dots, V_n)$$

是包含 $V_1, V_2, \dots, V_n$ 的最小子空间.

证明: 令 $W = V_1 + \dots + V_n$

$$\forall \alpha \in V_i \quad \alpha = 0 + \dots + 0 + \alpha + 0 + \dots + 0 \quad \text{则 } \alpha \in W \Rightarrow V_i \subseteq W$$

$$\therefore V_1 \cup V_2 \cup \dots \cup V_n \subseteq W$$

另一个 W' 包含 $V_1 \cup V_2 \cup \dots \cup V_n \Rightarrow W \subseteq W'$ (F证).

$$\forall \alpha \in W, \alpha = \alpha_1 + \dots + \alpha_n \quad (\alpha_i \in V_i) \quad \alpha_i \in V_i \subseteq W' \subseteq W'$$

$$\therefore \alpha_1 + \dots + \alpha_n \in W' \Rightarrow W \subseteq W'$$

(有限维).

直和. 假设 V_i 为 V 的子空间, 则下列论述等价 =

$$① U_1 + \dots + U_n = V_1 + \dots + V_n, \quad V_i, U_i \in V_i \text{ 则 } V_i = U_i$$

$$② U_1 + \dots + U_n = 0 \text{ 则 } U_1 = \dots = U_n = 0$$

$$③ V_i \cap (V_1 + \dots + V_{i-1} + V_{i+1} + \dots + V_n) = \{0\}$$

$$④ \text{若 } \alpha_1, \dots, \alpha_{i k_i} \text{ 是 } V_i \text{ 的基, 则 } \{\alpha_1, \dots, \alpha_{i k_i}, \alpha_{j 1}, \dots, \alpha_{j k_j}, \dots\}$$

是 $V_1 + \dots + V_n$ 的基.

$$⑤ \dim(V_1 + \dots + V_n) = \dim V_1 + \dots + \dim V_n.$$

证明: ① $\Rightarrow$ ② $u_1 + \dots + u_n = 0 = 0 + \dots + 0$ ($0 \in V_i$) $\therefore u_i = 0$

② $\Rightarrow$ ③ $\forall \alpha \in V_i \cap (V_1 + \dots + V_{i-1} + V_{i+1} + \dots + V_n)$ 则 $\exists \beta = 0$

则 $\alpha = \alpha_1 + \dots + \alpha_{i-1} + \alpha_{i+1} + \dots + \alpha_n$ ($\alpha_j \in V_j, j \neq i$)

$\Rightarrow \alpha_1 + \dots + \alpha_{i-1} - \alpha + \alpha_{i+1} + \dots + \alpha_n = 0$

$\therefore \alpha_j = 0$ 且 $\alpha = 0$

③ $\Rightarrow$ ④ $V_1 + \dots + V_n = L(\alpha_1, \dots, \alpha_{k_1}, \dots, \alpha_{n_1}, \dots, \alpha_{n_{k_n}})$

下证 $\alpha_1, \dots, \alpha_{n_{k_n}}$ 线性无关.

令 $x_1 \alpha_1 + \dots + x_{n_{k_n}} \alpha_{n_{k_n}} = 0$

$(-x_1 \alpha_1) + \dots + (-x_{n_{k_n}} \alpha_{n_{k_n}}) = x_2 \alpha_2 + \dots + x_{n_{k_n}} \alpha_{n_{k_n}}$

$\Downarrow$
 $\in V_1$

$\Downarrow$
 $\in V_2 + V_3 + \dots + V_n$

由 ③ $x_1 \alpha_1 + \dots + x_{n_{k_n}} \alpha_{n_{k_n}} = 0$

由 $\alpha_1, \dots, \alpha_{k_1}$ 为 V_1 的基 $\therefore x_1, \dots, x_{k_1} = 0$ (依此类推)

④ $\Rightarrow$ ⑤ 显然

⑤ $\Rightarrow$ ④ 反证法:

假设 $\alpha_1, \dots, \alpha_{n_{k_n}}$ 不是基, 但 $V_i = L(\alpha_1, \dots, \alpha_{k_i})$

$\therefore V_1 + \dots + V_n = L(\alpha_1, \dots, \alpha_{n_{k_n}})$

$\therefore \alpha_1, \dots, \alpha_{n_{k_n}}$ 线性相关.

故其极大线性无关组 S 中所含向量个数 $< k_1 + \dots + k_n$.

$V_1 + \dots + V_n = L(S)$

$\dim L(S) = |S| < k_1 + \dots + k_n = \sum \dim V_i$ 与 ⑤ 矛盾.

④ $\Rightarrow$ ① 已有 $u_1 + \dots + u_n = v_1 + \dots + v_n$.

用 $u_i, v_i \in V_i \Rightarrow u_i = x_{i1} \alpha_1 + \dots + x_{ik_i} \alpha_{k_i}$

$v_i = y_{i1} \alpha_1 + \dots + y_{ik_i} \alpha_{k_i}$

$\therefore x_{11} \alpha_1 + \dots + x_{n_{k_n}} \alpha_{n_{k_n}} = y_{11} \alpha_1 + \dots + y_{n_{k_n}} \alpha_{n_{k_n}}$

$(x_{11} - y_{11}) \alpha_1 + \dots + (x_{n_{k_n}} - y_{n_{k_n}}) \alpha_{n_{k_n}} = 0$

由 ④ $x_{11} = y_{11}, \dots, x_{n_{k_n}} = y_{n_{k_n}} \Rightarrow u_i = v_i$

3. E 向量空间的积与商. 积 $V_1 \times \dots \times V_m = \{ (v_1, \dots, v_m) \mid v_i \in V_i \}$.

积空间 ΠV_i 的基 (F 上的线性空间)

设 $\alpha_{i1}, \dots, \alpha_{ik_i}$ 为 V_i 的基, $\dim V_i = k_i$

令 $\beta_{i1} = (0, 0, \dots, 0, \alpha_{i1}, 0, \dots, 0) \dots \beta_{ik_i} \in \Pi V_i$ 为 ΠV_i 的基

3.77 积与直和的证明. P72.

要证 $U_1 + \dots + U_m = U_1 \oplus U_2 \oplus \dots \oplus U_m$

即证 $U_i \cap U_1 + \dots + U_{i-1} + U_{i+1} + \dots + U_m = \{0\}$.

令 $\forall v_i \in U_i \cap U_1 + \dots + U_{i-1} + U_{i+1} + \dots + U_m$

则 $v_i = w_1 + \dots + w_{i-1} + w_{i+1} + \dots + w_m, w_j \in U_j$

$$w_1 + \dots + w_{i-1} - v_i + w_{i+1} + \dots + w_m = \Gamma((w_1, \dots, -v_i, \dots, w_m)) = 0$$

Γ 为单射 $\Rightarrow \ker \Gamma = \{0\}$

$\therefore w_i = v_i = 0$ 得证.

反之. 要证 Γ 为单射 即证 $\ker \Gamma = \{0\}$

$$\forall (v_1, \dots, v_m) \in \ker \Gamma \quad \Gamma((v_1, \dots, v_m)) = v_1 + \dots + v_m = 0$$

$$-v_1 = v_2 + \dots + v_m \in U_1 \cap U_2 + \dots + U_m$$

$$\therefore U_1 + \dots + U_m = U_1 \oplus \dots \oplus U_m \quad \therefore U_1 \cap U_2 + \dots + U_m = \{0\}$$

$\therefore v_1 = 0$ 得证.

3.78 V 为有限维的, 且 $U_1, \dots, U_m$ 均为 V 的子空间.

$$\text{则 } U_1 + \dots + U_m \text{ 为直和. } \Leftrightarrow \dim (U_1 + \dots + U_m) = \dim U_1 + \dots + \dim U_m$$

证明: $\Rightarrow$ 由直和, 根据 3.77 $\Gamma: U_1 \times \dots \times U_m \rightarrow U_1 + \dots + U_m$ 同构

$$\text{则 } \dim (U_1 \times \dots \times U_m) = \dim \text{Im } \sigma + \dim \ker \sigma = \dim (U_1 + \dots + U_m) + \dim \ker \sigma.$$

$$= \sum \dim U_i + \dim \ker \sigma.$$

$$\text{又: } \dim(U_1 \times \dots \times U_m) = \sum \dim U_i$$

$$\therefore \dim \ker \sigma = 0 \quad \therefore \ker \sigma = \{0\} \quad \therefore \sigma \text{ 为单射}$$

由 3.77 得证.
